# The Public Humiliation of Hillary Clinton

## Venting

Now that the election is over I find it extremely hard to get excited about the Trump administration. Am I alone? Everybody I know is still in shock and it has been at least two months since that dreadful outcome. I wonder if the people who elected him are having buyer's remorse. One thing I know for sure is that the atmosphere feels different. The country goes from Obama to Trump. We're talking about both ends of the spectrum, unbelievable. I drag myself to my morning shows and barely muster up enough energy to tune in. Mika from Morning Joe led the

charge of publically humiliating Hillary Clinton. I guess Mika thought she was being a good journalist by continuing to repeat the nonsense and propaganda over and over. The tape keeps playing in my head, her daily rhetoric about Hillary Clinton. I thought she was about girl power. She sat amongst Joe and the crew and just publically assassinated Hillary every chance she got. I could not believe how she sat day after day and let those men crucify Hillary. My God, what purpose did she serve? Email, servers, can't be trusted and the list goes on and on. Whose side

was she on anyway? One thing I know for sure is that Fox News was clear about who their candidate was and they did not run any negative stories about their candidate. Fox News always gave their candidate positive press. MSNBC pretended to be impartial, but morning, noon, and night... email...server...and not to mention WikiLeaks. How can the leading news story be about some stolen leaked information from some hacked emails? That means they were illegal. Is that real news we can use or just ratings. When I compare MSNBC to the young man who sent fake news sto-

ries across the internet, I can hardly tell the difference. Now they spend so much time trying to figure out what did Hillary do wrong? News flash she did nothing wrong it was you guys the MEDIA. I'm just saying!
